

Engineering Project Manager Position

Trans-Market is a process design company with offices in Tampa, San Antonio, Houston and Los Angeles. Our area of expertise is in food & beverage processing systems. We provide turn-key system integration including Process Engineering, Electrical Design, Automation, CAD Design, Installation, Commissioning, Validation & Support.

Trans-Market offers a dynamic work environment, with opportunities to take part in system design in addition to hands-on start-up activities. You will have the opportunity to work on projects from conception to completion with a project team consisting of multiple disciplines, skillsets, and backgrounds. We offer group medical insurance, 401(k), short- & long-term disability insurance and competitive pay commensurate with experience.

The Engineering Project Manager will be responsible for managing projects and their project teams from proposal development to project closure. This position requires skilled planning and the ability to communicate clearly across a team of varied technical practices. Projects are not successfully completed by individuals, but rather by an entire team working together – collaboration, led by the Engineering Project Manager, is key to our success. Engineering Project Managers are the core of our project teams, and the conduit of communication between us and our customers. To enable these channels of communication, our Project Managers exhibit a broad range of engineering technical competence combined with a core understanding of Project Management principles.

Job Role Responsibilities

- Management of projects & project teams from proposal development to project closure
- Collect and communicate customer requirements to project team in order to clearly define scope of work
- Consult with project team to develop activity lists, sequences, & durations in order to develop and maintain a project schedule
- Compile technical cost estimates created by project team to develop and formalize project budgets & proposals
- Promote a culture of quality within your project team, ensuring process verification and deliverable validation throughout the project life-cycle
- Direct project team for successful completion of project deliverables and encourage their development through positive feedback and support
- Proactively engage in clear and concise communication between all project team members, subcontractors & customers
- Work with project team to identify project risks and develop plans for mitigation and exploitation to advance project success
- Plan and manage subcontractor procurements to supplement Trans-Market's areas of expertise in order to facilitate execution of project requirements
- Follow approved methods of project change control to allow for transparency, proper documentation, and understanding between our Project Team and the Customer
- Capability to develop top-level comprehension of technical deliverables in order to direct the Project Team - understand their requirements, obstacles, and help devise resolutions
- Broadly provide consultation to Project Team in technical disciplines, utilizing expert knowledge
- Direct integration of project team technical knowledge across multiple disciplines to allow for creation of successful and complete deliverables

- Report to Upper Management, Team Managers, and Accounting regularly on status and variances to projects related to quality, budget, and schedule

Experience Preferences

- Management of Project Activities and/or Project Teams
- Experience in project execution from the position of a “seller”
- Technical competency in Process Engineering Design
- Work Experience within the Food & Beverage Industry
- Bachelor’s degree within Engineering Discipline
- Aptitude in computer software packages such as Microsoft Office

Work Place Requirements

- Professional and positive attitude that promotes collaboration with team members
- Internally motivated and disciplined in approach to work
- Ability to travel up to 25% for proposal, projects, and training activities
